The Department of Natural Resources is providing this report to satisfy the requirements of the "Procedures Concerning Certain Licenses Act", IC 14-11-4, and its associated administrative rule, 312 IAC 2-3. The application files are available for public inspection at the Division of Water's office in Indianapolis. Please contact the Division's Technical Services Section at (317) 232-4160 or the toll free number 1-877-928-3755 to make an appointment for file review. Photocopies may be made for a nominal charge of \$0.10 per 8 1/2 " X 11" copy.

A pre-action public hearing on an application may be requested by filing a written petition with the Director, Division of Water:

Michael W. Neyer, P.E., Director Division of Water Room W264 402 West Washington Street Indianapolis, Indiana 46204

For a petition to be considered valid it must:

- 1. Contain the typed or legibly printed name and complete mailing address of each petitioner;
- 2. Be signed by a minimum of 25 individuals who are at least 18 years old and either reside in the county where the project will take place or own real property within 1 mile of the project site;
- 3. Affirm that each signatory to the petition satisfies the requirements of item 2; and
- 4. Identify the application for which the public hearing is being requested either by the application # or the applicant's name and the project description.

A petition which does not meet these requirements will be considered invalid and the hearing request will not be granted.

A person may request that the Department provide written notice of its action on an application by filing a written request with:

Division of Water Room W264 402 West Washington Street Indianapolis, Indiana 46204

The request must identify the application by either the application # or the applicant's name and the project description.

Application # : DR-464

Stream : Foss Ditch

Applicant : Lake County Drainage Board

Dan Gossman

2293 North Main Street Crown Point, IN 46307

Description : The purpose of the project is to restore Foss Ditch to its original drainage

capacity, improve bank stability, and decrease downstream sedimentation problems. Proposed activities include removal of accumulated sediment from the bottom of the ditch, installation of sediment traps, placement of rip rap for bank protection, placement of erosion control blankets for bank stability, and log jam

and tree removal. A restoration of Foss Ditch drainage is proposed.

Details of the project are contained in information and plans received at the

Division of Water on September 22, 2006.

Location : The project begins at 125th Avenue, just east of the intersection with Clark Street.

It continues south/southwest for approximately 4.25.miles until it empties into

Lake Dalecarlia near 153rd Avenue

near Cedar Lake, Center Township, Lake County Section 18, T 34N, R 9W, St. John Quadrangle

Stream : West Fork White River

Applicant : Riverwalk Inc

Steve Schwartz 118 Cicero Road

Noblesville, IN 46060-1401

Description : The City of Noblesville proposes to construct Phase 1 of the Riverwalk project

along the west side of Downtown Noblesville. Construction in the floodway will include approximately 205' of sidewalk with an adjoining brick tie-back wall and guardrail. The tie-back wall will extend upstream of the overall project to allow for future development of the path. The overbank will be cut back to accomodate the path. Details of the project are contained in plans and information received at the

Division of Water on September 18, 2006.

Location : In the left overbank just upstream of the State Road 32 bridge extending

downstream about 150'

Stream : French Lick Creek

Applicant : Collier Enterprises LLC

John W Collier 2791 Old SR 145

French Lick, IN 47432-9438

Description

: A commercial facility will be developed along the east right bank of the river. The facility will consist of a 80' by 200' hotel, a 100' by 100' theater, and a 800' by 900' commercial/retail structure. Additionally the surrounding areas of the site will be paved parking. The entire developed area will be constructed on fill. The fill will cover a 300' by 1000' area and will vary in depth from 1' at the landward edge to 6' near the stream. It will be set back 5' from the top of the stream bank and will have a finished elevation of 490.0', NGVD. The fill will have 3:1 side slopes from the finished grade down to the existing floodplain elevations. The parking area will be constructed at the fill's finished elevation. The buildings' lowest floor elevations will be 491.0', 491.5', and 491.3', NGVD. Details of the project are contained in information and plans received at the Division of Water on

September 19, 2006.

Stream : Unnamed Tributary Griffy

Creek

Applicant : Indiana University

Greg A Olyphant

Dept. of Geological Sciences

Indiana University

Bloomington, IN 47405-2208

Description : Approximately 0 ft of the stream channel will be realigned and straightened in the

construction of the rectangular weir. The weir will be approximately 3 ft wide. It will be flush with the stream bed, have a width of approximately 20 ft in order to cover the entire width of the stream, and its sides will mimic the stream bank. Additionally, approximately 3 ft of existing channel immediately in the area where

the weir will be constructed will be cleared of brush and debris.

A realignment of a channel is proposed. Details of the project are contained in information received electronically at the Division of Water on September 21.

Application # : FW-24011

Stream : Honey Creek

Applicant : Gradex, Inc.

Jason Dapp

3685 Priority Way S. Drive

Suite 140

Indianapolis, IN 46240

Description

Two temporary stream crossings will be constructed across Honey Creek for the purpose of accessing a borrow area for dirt needed to construct a state highway road project (INDOT Contract R-28177-A). The two temporary stream crossings will be used by construction trucks to haul borrow dirt for the highway project for a period of time estimated to equal 18 months. Both temporary stream crossings will consist of five 4' diameter reinforced concrete culverts set side-by-side with a spacing of approximately 3' between culverts. The temporary roadway will be made of compacted dirt with a top-of-road surface set approximately 2.0' above the outside crown of the culverts. The temporary roadway surface will have a width of approximately 50' at each crossing. The culverts will all have a length of approximately 80' and will project out from the road embankment on both ends. The entire length of the temporary crossings will have a 2' thick layer of 12" rip rap placed on both the upstream and downstream embankment side slopes which will have a 2:1 side slope. The west crossing will have upstream culvert invert elevations of approximately 489.8', NGVD and downstream culvert invert elevations of approximately 489.6', NGVD. The east crossing will have upstream culvert invert elevations of approximately 488.8', NGVD and downstream culvert invert elevations of approximately 488.6', NGVD. The left and right overbanks of the stream at both temporary stream crossings will be temporarily excavated to provide an approach road to the temporary crossings which will have their roadway surfaces set below the high bank elevations to permit overtopping during flooding events. The crossing locations will minimize the loss of trees along the stream. After completion of the construction project, the temporary crossings will be removed and the streambanks and overbanks will be restored. The east temporary stream crossing will cross the stream approximately 2000' downstream of the McDaniel Road crossing of the stream and the west crossing will cross the stream approximately 3000' downstream of the McDaniel Road Crossing. Both crossing sites are part of a contiguous construction site. Two temporary stream crossings are proposed. Details of the project are contained in information received electronically at the Division of Water on September 22, 2006.

Location
